Education

University of Oxford Sep 2024 – Mar 2027
MPhil in Economics, Merit
- Selected modules: Microeconomics (71%), Econometrics (70%), Further Mathematical Methods, Advanced Empirical Research Methods, Industrial Organisation, Microeconomic Theory

University of Warwick Sep 2021 – Jun 2024
BSc in Economics, First Class Honours
- Selected modules: Game Theory (82%), Industrial Economics (78%), Microeconometrics (74%)
- Awarded departmental commendation for overall academic performance

Work Experience

Freelance Tutor Jul 2025 – Present
Blue Education
- Delivered 85+ hours of one-to-one tuition across 12 students in economics, game theory, econometrics and data science, adapting explanations to students with limited prior knowledge
- Developed Python data science exercises and explained econometrics and game theory through step-by-step board work and concrete examples
- Delivered a degree-exploration session connecting economics, finance and data science to help a student assess course content and subject fit

Teaching Assistant, EC338 Microeconometrics Jan 2024 – Jul 2024
University of Warwick, for Prof Neil Lloyd
- Produced updated course material for a class of 80 undergraduates across 24 contact hours
- Developed interactive econometric simulations in R; managed codebase in Git
- Supported online textbook development by formatting proofs and examples in HTML

Research Experience

The Optimal Strictness of Up-or-out Contracts
MPhil Thesis, supervised by Meg Meyer, University of Oxford *2025 – 2026*
- Modelled up-or-out probation with agent-chosen projects differing in informativeness about ability
- Characterised informative equilibria in which strict thresholds induce ability-revealing projects
- Illustrated comparative statics with numerical simulations in R

Replication and Extension: Mathevet & Taneva (2022), Appendix B.2
Independent *2026*
- Implemented the linear programme in R (`lpSolve`), verified the published values
- Extended the computation with a 2,000-draw parameter sweep; conjectured that cross-agent heterogeneity in cost–benefit ratios drives the gap between the BCE optimum and its organisational refinement

Reproduction: Chen & Zhong (2025, *Econometrica*)
Core Empirical Research Methods Assessment, University of Oxford *2025*
- Reproduced the main tables of "People Are More Moral in Uncertain Environments"

The Effect of Ranked Income on Mental Health: A Panel Data Approach
BSc Dissertation, supervised by Han Zhang (74%) *2024*
- Data cleaning and variable construction for twelve waves of BHPS/Understanding Society panel data
- Estimated average marginal effects using fixed-effects ordered logit models
- Presented findings at the 11th International Conference of Undergraduate Research

Skills and Interests

Statistical tools	R, Python, Stata
Other tools	LaTeX, Git, Quarto, HTML, Microsoft Office
Languages	Chinese (native), English (fluent)
Interests	Cooking, co-op/strategy video games, recreational mathematics, hardware crafting (built an RLCD status display for AI coding agents)
